

MALDROID'S Data Collection

Dataset	Category	Description	URL Source
CICMal2017 (29,999 datas)	• APK Benign vs Malicious • Extracted Features (mostly permissions) • Malware Signature	• This dataset contains app metadata gaya ng App, Package, Category, Description, etc. and permission-based features examples are; Dangerous permissions count, Safe permissions count, and binary indicators for specific Android permissions. • Yung final column (Class) indicates kung yung APK is benign(0) or malicious(1).	https://www.kaggle.com/datasets/saurabhshahane/android-permission-dataset

AMSF Dataset (5,019 datas)	- Extracted Features (mostly API Calls) - Malware Signature	- The dataset contains API call usage frequencies of Android apps and each row corresponds to a single app tested. - Columns represent specific Android APIs or classes examples; android.app.Activity, android.util.Log.v. - Values indicate how many times an app invoked a given API. - The first column name (class) indicates whether the tested APK is benign(0) or malicious(1).	https://www.kaggle.com/datasets/laxman1216/android-static-features-datasets6-features
DREBIN - Feature Identification (214 datas)	N/A	This dataset is only identification of each unique extracted feature [API Calls, Permissions, Intent] for the 2nd DREBIN Dataset.	https://www.kaggle.com/datasets/shashwatwork/android-malware-dataset-for-machine-learning
DREBIN - APK Signature (15,036 datas)	- Extracted Features - Malware Signature	- This dataset contains all of the DREBIN's tested APKs. - Columns represent all of extracted feature recorded on the 1st DREBIN Dataset. - Values indicate True/requested (1) or False/not requested (0). - The final column (class) indicates whether the APK is benign(B) or malicious(S).	https://www.kaggle.com/datasets/shashwatwork/android-malware-dataset-for-machine-learning

AM (11,466 datas)	• Metainformation • APK Benign vs Malicious • Extracted Features (Permissions) • Malware Signature	• This dataset are metainformation like (eg. name, MD5, version, Min_SDK, Min_Screen, Min_OpenGL, Supported_CPU, Signature, Developer, Organization, Locality, Country, State, description, rating_number, rating_count.) of benign and malware Android App samples • Has some Permission features like (android.permission.INTERNET, android.permission.READ_SMS, android.permission.CAMERA , etc.) with values indicates as True/requested (1) or False/not requested (0). • Final column naman (LABEL) indicates benign (benignware) or malicious (malware).	https://www.kaggle.com/datasets/saurabhshahane/android-malware-dataset
